Follower quality distribution

- Likely Authentic: 47.6% (381)
- Some Suspicious Signals: 3.5% (28)
- Highly Suspicious: 25.1% (201)
- Very High Suspicion: 23.8% (190)

Suspicious audience signals

- 23% — Abnormal following ratio (present in 53% of sample)
- 19% — Mass-follow pattern (present in 50% of sample)
- 14% — Near-empty profile (present in 40% of sample)
- 10% — No profile picture (present in 37% of sample)
- 9% — New account, high following (present in 44% of sample)
- 8% — Low activity combination (present in 25% of sample)
- 6% — Username anomaly (present in 50% of sample)
- 5% — No biography (present in 52% of sample)
- 4% — Inactivity signals (present in 17% of sample)
- 2% — Very few posts (present in 16% of sample)

Why this score?

Bot/Fake score 42/100 from 800 sampled accounts: 52% show suspicious signals, 49% strong ones. Mean per-account suspicion 38.

- Abnormal following ratio (23%): 53% of sampled accounts show this signal
- Mass-follow pattern (19%): 50% of sampled accounts show this signal
- Near-empty profile (14%): 40% of sampled accounts show this signal
- No profile picture (10%): 37% of sampled accounts show this signal
- New account, high following (9%): 44% of sampled accounts show this signal
- Low activity combination (8%): 25% of sampled accounts show this signal

×2.54

OBSERVED

Why this engagement score?
Quality 70/100. Observed engagement is ×0.2 the benchmark for this follower tier.

- Engagement vs expected (43%): 0.34% observed vs 1.7% typical for 100K – 1M followers (×0.2)
- Comment / like balance (1%): 2.54 comments per 100 likes
- Like-count dispersion (6%): Like counts vary naturally across posts
- Outlier posts: No like-count outliers

Disclaimers

- All authenticity figures are ESTIMATES derived from detected signals, not verified facts.
- No single signal classifies an account as a bot; scores combine multiple weighted features.
- Estimates from small samples carry wide intervals and are labelled LOW confidence.
- Only data legitimately available from the active provider or user-supplied datasets is analyzed.
