Follower quality distribution

- Likely Authentic: 92.5% (555)
- Some Suspicious Signals: 1.7% (10)
- Highly Suspicious: 2.7% (16)
- Very High Suspicion: 3.2% (19)

Suspicious audience signals

- 29% — Abnormal following ratio (present in 7% of sample)
- 14% — Inactivity signals (present in 9% of sample)
- 12% — Mass-follow pattern (present in 6% of sample)
- 10% — Near-empty profile (present in 6% of sample)
- 10% — No biography (present in 23% of sample)
- 8% — No profile picture (present in 6% of sample)
- 6% — Low activity combination (present in 3% of sample)
- 5% — New account, high following (present in 5% of sample)
- 3% — Username anomaly (present in 6% of sample)
- 3% — Very few posts (present in 4% of sample)

Why this score?

Bot/Fake score 6/100 from 600 sampled accounts: 8% show suspicious signals, 6% strong ones. Mean per-account suspicion 6.

- Abnormal following ratio (29%): 7% of sampled accounts show this signal
- Inactivity signals (14%): 9% of sampled accounts show this signal
- Mass-follow pattern (12%): 6% of sampled accounts show this signal
- Near-empty profile (10%): 6% of sampled accounts show this signal
- No biography (10%): 23% of sampled accounts show this signal
- No profile picture (8%): 6% of sampled accounts show this signal

Engagement quality model	ESTIMATED	

Disclaimers

- All authenticity figures are ESTIMATES derived from detected signals, not verified facts.
- No single signal classifies an account as a bot; scores combine multiple weighted features.
- Estimates from small samples carry wide intervals and are labelled LOW confidence.
- Only data legitimately available from the active provider or user-supplied datasets is analyzed.
